

Sites that look sharp, load fast, and hold up in QA.

We build new sites, redesign tired ones, and run performance and QA so local businesses and startups can launch without surprises.

English or Spanish — whichever you use with your customers. The name stays Pixel-Craft.

Two kinds of teams. The same craft.

Local businesses

A site that works on every phone, helps people find you, and makes it easy to call, book, or buy.

Startups

A launch-ready site: a clear product story, performance you can stand behind, and QA before you ship.

What we do — four services, together or on their own

Website build

New sites from a clear brief: structure, design, and a launch that actually works.

- Information architecture and page templates
- Responsive implementation
- Analytics and form wiring
- Launch checklist and handoff

Design improvement

UI and layout that look current, read clearly, and match how people use the site.

- Visual refresh and component polish
- Mobile-first layout fixes
- Brand-consistent type and color
- Clickable prototypes when needed

Performance & SEO

Faster pages, cleaner markup, and the basics that help search and Core Web Vitals.

- Core Web Vitals pass
- Image, font, and script hygiene
- On-page SEO and metadata
- Accessibility baseline

Web QA

Cross-browser, responsive, and functional checks so launch is not a surprise.

- Device and browser matrix
- Functional and form testing
- Broken-link and 404 sweep
- Bug list with severity and repro

How we work

A short path from first call to a site you can stand behind.

01

Discover

Goals, audience, current site, and what “done” means.

02

Design

Structure and visuals that match your brand.

03

Build

Clean, responsive build with performance first.

04

QA

Phones, browsers, forms, and real user paths.

05

Launch

Go-live, punch list, and a clear handoff.

To start, send a short brief

- Whether you are a local business or a startup
- What you need: build, design, optimize, or QA
- Your current site URL (if you have one)
- Timeline and what “done” looks like for this launch

Why Pixel-Craft

- Looks sharp and holds up under real use
- Performance and SEO from the first pass
- QA before customers, press, or investors hit the site

Ready for a site that can take scrutiny?
